RG DIFFERENTIAL	.040	.040	.040	.034	.021

Suggested Maintenance

Follow the steps below to take the ball back to "out of the box" condition.

- Items needed: 500-grit and 2000-grit Abralon® Pads, a ball spinner, and water. All sanding should be done on four sides of the ball.
- Side one: Center of grip up, flip the ball 180 degrees for side two, turn 90 degrees for side three and flip another 180 degrees for side four.
 1. Using the 500-grit Abralon® pad, sand the ball for 15 seconds on each side.
 2. Using the 2000-grit Abralon® pad, sand the ball for 30 seconds on each side.
- To touch up the surface, skip step 1, just use step 2.

Roto Grip® suggests repeating step 2 from above every 20-30 games and utilizing both steps every 60-80 games. This will keep the surface of the ball more constant, resulting in an increased longevity and a more consistent reaction.
