

MUTANT CELL™ PEARL

The progression continues with the introduction of the Mutant Cell Pearl. This next generation Crown™ line release adds another dimension to the already popular Cell™ line.

The Nucleus II™ core with its higher RG value and increased intermediate differential creates a much more defined breakpoint than the original, but still features the predictability that has made the Cell line so popular.

Enhancing that motion even further is the Cytoplasmic™ XL pearl reactive coverstock. The combination of increased surface topography and enhanced friction values delivers stronger mid-lane traction with extreme entry angle to the pocket.

This latest edition will be the most radical Cell of all...

Facts

Coverstock:	Cytoplasmic XL Pearl Reactive
Color:	Aqua/Copper/Purple
Factory Finish:	1500-grit Polished
Weight Block:	Nucleus II Core
Flare Potential:	7+ Inches
Spin Rate:	6 Seconds (15 lbs.)
Lane Condition:	Medium - Heavy Oil
D-Scale:	73 - 75
Available Weights:	12 - 16 lbs.
SKU:	RPM

Core Dynamics

WEIGHT	RG VALUE	RG DIFF	PSA DIFF	60° SPIN TIME
16 lbs.	2.52	.048	.022	5 sec
15 lbs.	2.54	.047	.021	6 sec
14 lbs.	2.57	.040	.020	7 sec
13 lbs.	2.64	.035	.014	N/A
12 lbs.	2.67	.027	.009	N/A

Suggested Maintenance

Items required: 500-grit Abralon®, Grey Scotch-Brite™, Storm® Step Two™ finishing compound, a ball spinner, and water.

Sanding should be done on all four sides of the ball. Side (1) is center of grip; turn ball 180° for Side (2); turn ball 90° for Side (3); turn ball 180° for Side (4). For best results, sand with water and polish when dry.

Step 1: 500-grit Abralon – apply to all four sides with medium pressure for 15 second per side.

Step 2: Grey Scotch-Brite – apply to all four sides with light pressure for 40 seconds per side.

Step 3: Storm Step Two finishing compound – polish lightly for 15 seconds, two sides only.

Roto Grip recommends Steps 2 & 3 every 20-30 games for touchup maintenance and all Steps every 50-60 games to restore, revitalize and maintain the original Out of Box reaction.
