

Prodigy™

## Physical Properties

	<u>Prodigy</u>
Color:	Carbon/Sapphire/Sterling
Coverstock:	R2X™ Pearl Reactive with E.T.M.
Weight Block:	Centripetal™
Ball Finish:	4000-grit Abralon®
Logos:	Prodigy, CG, Storm, Oval Bolt
Durometer:	73-75
Flare Potential:	5" - 6" (High)
Fragrance:	Blueberry
Available Weights:	12-16 lbs.

Ball Weight	Radius of Gyration	Differential
16 lbs.	2.48	.052
15 lbs.	2.48	.050
14 lbs.	2.53	.049
13 lbs.	2.59	.045
12 lbs.	2.65	.035

### Resurfacing Method:

Follow the steps below to take the ball back to "out of the box" condition. Items needed: 500-grit Abralon pad, 4000-grit Abralon pad, a ball spinner and water. All sanding should be done on four sides of the ball. Side one-center of grip up, flip the ball 180 degrees for side two, turn 90 degrees for side three and flip another 180 degrees for side four.

1. Using the 500-grit Abralon pad, sand the ball for 15 seconds on each side.
2. Using the 4000-grit Abralon pad, sand the ball for 60 seconds each side.

### Suggested Maintenance:

Storm suggests using Reacta Clean™ Reactive Bowling Ball Cleaner to clean your bowling ball after every bowling session.

To touch up the surface, skip step 1 and just use step 2. Storm suggests using step 2 every 20-30 games and both steps every 50-60 games. This will increase longevity and create a more consistent reaction for your new Storm bowling ball.
